If you require technical assistance, call 1-844-GO-VIAVI or send an email to TAC@viavisolutions.com. For the latest TAC information, go to <http://www.viavisolutions.com/en/services-and-support/support/technical-assistance>.

Connection via the Ethernet interface

The CellAdvisor 5G can be controlled and programmed remotely through the Ethernet interface.

The link to the PC can be direct, using an Ethernet crossover cable to link the CellAdvisor 5G to the PC, or via a network.

Direct connection

- 1 Connect directly the CellAdvisor 5G to the PC with an Ethernet cable, using the RJ45 port on each equipment.
- 2 Make sure the network configuration onto the PC is set to the **Dynamic** mode:
 - a Click on Start > Control Panel.
 - b Double click on **Network Connection**.
 - c Double click on Local Area Connection.
 - d In the dialog box, click on **Properties**.
 - e Check the parameter **Internet Protocol (TCP/IP)** is selected and click once on it (underlined in blue).
 - f Click on Properties button.
 - g On the tab **General**, check the parameter **Obtain an IP address automatically** is selected; if not, click to select it.
 - h Click on **OK** and close all the dialog boxes opened onto the PC.
- 3 On the CellAdvisor 5G, go to **System > Network**, select **Static** in the IPv4 box.
- 4 Note the IP address and wait for about ten seconds while the connection is established.

Connection via a local network

- 1 On the PC, find the IP address and the mask of the PC's sub-network:
 - With Windows 98 or Millennium: Select Start > Execute, then enter `winipcfg` and click on **OK**.
 - With Windows NT, 2000, XP, Vista, 7 or 10: Select **Start > Programs > Accessories > Dos Prompt**, type `ipconfig`", then **Enter**.
- 2 Note the IP address and the mask of the PC's sub-network.
- 3 Plug the RJ 45 port of the CellAdvisor 5G into a hub or Ethernet switch with a straight-through Ethernet cable.
- 4 On the CellAdvisor 5G:
 - a Go to **System > Network**, select **Static** in the IPv4 box, then enter the **IP address**, **IP mask** of the PC and **IP gateway** previously noted (step 2).

-
- b** Go to **System > Network**, select **DHCP** in the IPv4 box. In this case, the IP address is automatically displayed but cannot be altered.
 - 5** Wait for about ten seconds while the connection is established.
 - 6** On the PC, make sure that the connection is operational by selecting **Start > Execute...** and typing `ping`.

Connection via USB TMC

The USB Test & Measurement Class(USB TMC) is a standard for programmatic control of USB-based test instruments that defines protocols used to send and receive messages. If you want to use the USB TMC protocol to communicate with the instrument remotely, you can only connect via USB without any additional settings.

Protocol used

The protocol used is TCP. Only one port may be used as a function of the type of command. You can confirm the port to be used by;

- a.** Access TCP 5025 port and query by the command “:PRTM:LIST?”
- b.** Choose the port for CA5G-SCPI among below examples.
“Fiber-ISU: 5026, Fiber-ISU-Local: 5027, Fiber-FO: 5028, Fiber-FO-Local: 5029, CA5G-SCPI: 5030”. From these examples, you are to access 5030 port.

SCPI command structure

Format of commands

The commands are of type SCPI. They have a hierarchical structure with a «root» level and one or more sub-levels known as «nodes». A command will be composed of a concatenation of «nodes».

Example: REALtime:FREQuency:SPAN:ZERO

- REALtime is the root
- :FREQuency is the 2nd level node
- :SPAN is the 3rd level node
- :Zero is parameter of the 3rd level node

Syntax of commands

The string of the commands includes upper letters and/or lower letters. Only the upper case letters are essential and the lower case letters may be omitted to shorten the commands. However, parameter should be fully named without omission.

The successive nodes of a command must be separated by a colon (:).

Example of commands:

- Complete form: INTERference:TRAcE:CLEAr:ALL

- Shortened form: INTER:TRA:CLEA:ALL
